YOUR NEW BRIDGE AND HOME CARE

Since we've replaced those missing teeth with a fixed bridge, your mouth is going to feel stronger and work better than before. That's what restorative dentistry is all about, and we're happy you made this investment in your health. Some suggestions:

Do be aware that plaque can accumulate under, around, and between your bridge and natural teeth. A little more attention and a little more brushing and flossing will lengthen the life of your restoration.

Bridges take more effort to keep clean than natural teeth. With practice, you'll master these skills. We have shown you how to use a floss threader to help you clean under your bridge.

Call us right away if you encounter any looseness or sore spots as time passes. Bridges can break; too, if your diet includes hard or brittle foods. Just exercise care.

In general, lavish the same attention on your bridge as you do on your natural teeth, and you'll be in good shape for a long, long time. And if you have family members or friends who could benefit from the quality dental care we provide, please let them know about us. We'll take good care of them.
